

C30-C35 Light Upland.

Rough receiver.

Machined receiver.

C60-C65 Light Woodcock.

## SUPER ORION C30-C35 LIGHT AND C60-C65 LIGHT

The technical design of our Super Orion receiver which is one of the lowest in the market has an interchangeable recoil plate located just underneath the barrel that confer to our Shotgun an exceptional strength. As our over & under is one of strongest shotgun we present today the C30-C35 Light, a lightweight version of our iconic Super Orion.

The choice of rough material is always a critical step in the manufacturing process of hunting weapons, we conducted extensive research with our metallurgist's partners to offer what's now the best in terms of Ultralight alloy.

The selection of superalloy Fortal 7075 is not a coincidence. Recognized in many areas of activity, such as aeronautics and high technology sectors, for these qualities of strength comparable to the best steels, this superalloy also feature mechanical elasticity which is essential on hunting weapons. About 3 times lighter than conventional steel, machining in the block this new receiver and forehand allowed us to save valuable hundred grams to offer a lighter shotgun with near a half Kilo less. More compact but still well balanced, thanks to these technical choices, robustness that forged for over

3 decades Super Orion's reputation has not been sacrificed.

Extremely strong, this 7075 superalloy acquires an exceptional shine after the meticulous hand polish provided in-house, which highlight the magnificent contrasts of our new ornamental engraving specially made by our skilled engraver for this new range of Super Orion Light.

With the new PVD protecting heat treatment made through out a vacuum deposition process on all these mechanical parts, with very high density multilayer deposit improves friction and resistance against premature aging to our Alloy receiver. This surface treatment virtually in-scratched and the color finish does not change as a result of passing time, ensuring better functioning of our mechanical parts while opening and closing your shotgun.

The exceptional qualities of this high-end heat treatment never used so far in the hunting gun industry will preserve the aesthetics of your Super Orion Light so that it retains even in the most hostile environments, this timeless beauty that has forged the international reputation of our hunting guns.

**C30 Light - Extractor**  
**C35 Light - Ejector**  
**Upland type**

Gauges available: 12 - 20Mag with Fixed Chokes or interchangeable Chokes Tubes Optional

Ventilated rib with barrel length: 700mm (28in) or 760mm (30in) Optional

Pistol grip or Straight stock made out of 2 Stars walnut on C30 - 3 Stars on C35

Average weight: average 2,7 Kg (6 Lbs) depending on gauge and barrel length

**C60 Light - Extractor**  
**C65 Light - Ejector**  
**Woodcock type**

Gauges available: 12 - 20Mag with Fixed Chokes or interchangeable Chokes Tubes Optional

Plume rib with barrel length: 600mm (23 1/2 in) or 660mm (26in) Pistol grip or Straight stock made out of 2 Stars walnut on C60 - 3 Stars on C65

Average weight: average 2,5 Kg (5Lbs 19oz) depending on gauge and barrel length
